Lagos, Nigeria

PROFESSIONAL SUMMARY

Technology professional with hands-on experience in project and product coordination — organising sprints, tracking tasks in Notion, coordinating cross-functional teams, and following up on deliverables to keep development on schedule — combined with practical software development skills in React.js, Next.js, HTML, CSS, and JavaScript, gained through supporting testing, debugging, and delivery within agile engineering teams. Skilled at bridging technical and business priorities, translating requirements into actionable tasks, and keeping projects moving from planning through execution. Seeking to build on this experience with formal management training to progress into technology project and product management.

WORK EXPERIENCE

Engineering Intern · BudPay Infrastructure 2024 – Present

– Support the Engineering team with software development, testing, debugging, and maintenance activities under the guidance of senior engineers — including implementing MixPanel analytics for Business V2 to enable data-driven tracking of user engagement and product behaviour.

– Assist in identifying and resolving technical and system-related issues, including integrating WordPress blog content into the BudPay website via REST API to improve content delivery and editorial workflows.

– Participate in the development and improvement of engineering projects and technical solutions, optimising application performance and enforcing cross-browser compatibility across Chrome, Firefox, and Safari.

– Conduct research and assist with technical documentation and project-related tasks, including intensive testing across React JS, Vanilla JS, and Vue JS libraries to ensure system stability and regression safety.

– Collaborate with other members of the Engineering team to support the successful delivery of assigned projects, including building the Download Receipt Module and a Quick Action Shortcuts feature to enhance the post-transaction user experience.

– Follow established engineering processes, standards, and company procedures while developing transactional HTML email templates using Beefree and conducting QA testing on mobile and web applications.

Project & Product Management · Fodab Technologies — Edify.ai 2023 – 2024

– Coordinated project and product management activities for Edify.ai, organising sprints and tasks in Notion to keep development on track.

– Coordinated team meetings and followed up on deliverables, gathering progress updates from contributors to monitor project status.

– Supported communication between technical and business stakeholders, helping translate priorities into actionable tasks.

– Built foundational front-end skills (HTML, CSS, JavaScript, React) alongside project coordination work.

TECHNICAL SKILLS

Project & Product Management

– Notion (Task & Sprint Tracking)
– Agile / Scrum Methodology
– Sprint Planning & Coordination
– Stakeholder Communication

Languages & Frameworks

– HTML5 / CSS3 / JavaScript (ES6+)
– React.js & Component Architecture
– Next.js
– Vue.js / Vanilla JS

Tools & Platforms

– Git & Version Control
– REST API Integration
– MixPanel Analytics
– WordPress API
– Beefree (HTML Email Templates)
– AWS (foundational)
– NoSQL & PostgreSQL

Core Competencies

– Project & Product Coordination
– Cross-Functional Collaboration
– Performance Optimisation
– Cross-Browser Compatibility
– QA Testing (Mobile & Web)
– Testing & Debugging

EDUCATION

B.Sc. Political Science
Bowen University
2016 – 2020
